vCISO Services offers a suite of consultative sessions with the industry's top cybersecurity firms.

vCISO Services aims to help an organization dig deeper into specific issues and find the right offering to meet their needs. The process begins with a free, no-risk consultation call to explore options and find the best solution. Any further services selected are offered at an exclusive discounted rate.

With vCISO Services, organizations can explore their options, find the best provider to meet their needs, and strengthen their systems against cyber-attacks – **all cost-effectively and with the best vendors in the market.**

Multifactor Authentication Consult
Protect against unauthorized access with enhanced authentication.

Multifactor Authentication (MFA) protects against unauthorized account takeovers from stolen, reused, or guessed passwords. Our MFA Consult will help you determine which solution is right for your organization and support you through the implementation process.

Active Directory Consult
Implement best practices for security and resilience to help mitigate the escalation of cyber incidents.

Active Directory defines the full spectrum of your organization's permissions. Our consult works with your infrastructure team to analyze the architecture in place and provide recommendations to harden core infrastructure security.

Endpoint Detection and Response Consult
Identify, deploy, and monitor an endpoint detection and response tool.

Our Endpoint detection and response (EDR) Consult will help your organization understand the importance and value of EDR, which solution is the best option for your organization, and how to properly deploy and monitor it.

Network Segmentation Consult
Optimize security with network segmentation solutions.

Robust network segmentation complicates a threat actor's ability to infiltrate your network. Our consult works with your organization to identify ways to segment the network better to protect what's most important.

Backups Consult
Evaluate and improve backups solutions to minimize downtime.

Properly designed and secured backups provide protection and leverage in the fight against ransomware. Our consult will assess your current backup strategy and identify ways to strengthen your plan.

Cloud Security Configuration Consult
Protect cloud-based systems, data, and infrastructure.

Our Cloud Security Configuration Consult addresses the increase in data stored in the cloud, identifies providers in use (such as MS365, Google Suite, Azure or AWS), and gives guidance on the proper security settings to enable or where you may need to implement additional tools.
