

Monitoring and Enhanced Insurance from Corvus and eProvenance

Corvus and eProvenance have teamed up to bring wineries, breweries and beverage distributors industry-leading monitoring and insurance coverage for sensitive cargo.

eProvenance is the leader in solutions to monitor and analyze shipment and storage conditions of sensitive and perishable cargo. In eProvenance, Corvus policyholders get an integrated partner for monitoring services, including the use of proprietary sensors for tracking the temperature of shipments, an online dashboard for viewing reports and analysis, and the eProvenance Score, which clearly indicates the extent of shipment damage (if any).

With data from eProvenance, Corvus can offer policyholders enhanced coverage based on their eProvenance Score. By consistently monitoring shipments, policyholders will not only have the information they need to improve handling conditions and shipment quality, but their insurance coverage will reflect this benefit, too.

Benefits of Corvus and eProvenance

Top Technology

Data collected by the eProvenance proprietary sensors are stored and analyzed in the company's secure online database, yielding clear actionable insights. These insights, accessible through a secure private dashboard, can be used to assess the performance of global distribution channels, assure quality and asset value, verify provenance, and make informed decisions around shipments.

The eProvenance Score

Proprietary, research-based algorithms determine the eProvenance Score, which clearly indicates the extent of shipment damage, if any – not just whether the shipment experienced problematic temperature conditions.

Enhanced Coverage from Corvus

With an eProvenance Score, any shipment will be offered enhanced coverage from Corvus, allowing for claims to be submitted for damaged goods based on the score, rather than waiting for a taste test to determine spoilage.
